

Intelligent Chaos

EMS' Intelligent Chaos SOA Practice Contracted as the Exclusive Provider of SOA Solutions for Northwestern University

Employer Management Services (EMS) (www.consultems.com) located in Tampa Bay, Florida has been a solution provider for the past eight years servicing 28% of the largest Universities within the Higher Education Industry.

With Oracle's announcement of Fusion middleware, EMS knew there was need to assist their clients with transitioning to this next step in their ERP evolution; thus was born EMS subsidiary, "Intelligent Chaos" (www.intelligentchaos.net), who focuses on providing revolutionary strategic SOA services and solutions. Their industry specific SOA Practice offerings have been designed to help organizations streamline, enable, accelerate and evolve their capabilities by providing a strong differentiating solution to address their marketplace needs. Intelligent Chaos' solutions respond to the Architectural needs of various industries including Higher Education, Healthcare, Hospitality, Financial, Government, and Public Sector.

In January 2007, the Intelligent Chaos SOA Practice was awarded and contracted as the exclusive provider of SOA design and deployment system integration solutions for Northwestern University located in Chicago, Ill. EMS platform premise for the Intelligent Chaos service set is utilizing the Oracle's Fusion Middleware and SOA Suite. IC simply adds value once the middleware has been purchased and provides the end users with the vision and framework of the new tool set. Take for instance, Northwestern; they will leverage the new tools within e-procurement by designing their business process gaps on the front end of the PeopleSoft e-procurement application.

SOA "Services as a Solution" brings a cost-effective alternative to investing into high maintenance, non-reusable vendor specific ERP system customizations, taking advantage of the decoupled, more flexible and adaptable solutions offered by adapting an SOA approach. Considering the rate of SOA adoption, a decision to go SOA now versus later can spell for significant IT savings for your next upgrade and improved business posturing and time to market.

Today, CIO's and CTO's across major industries are thinking seriously about how Web Service technologies can assist with consolidating and streamlining their internal IT operations, while further leveraging their current investment in applications and 3rd party applications. SOA is playing a key and compelling role to businesses by offering a more responsive environment to the user community while adding the agility required to see a return on investment within the Enterprise. Finally, enough companies and constituents are adopting middleware as the cure to disparate systems and improving their portfolio of solutions to compete in the market place.

Enterprise businesses will want to work with the industry experienced solution provider, Employer Management Solutions (www.consultems.com)\Intelligent Chaos (www.intelligentchaos.net) to ensure the SOA system integration solutions have a rock-solid foundation and framework to build upon for current and future operations. For more information call EMS-IC to discuss the business transformation strategy for Oracles Fusion Middleware.
